

MOSHIN KONDKARI

SENIOR AUTOMATION ENGINEER

PROFILE SUMMARY

I am a seasoned Automation Architect with over 15 years of experience in the Banking & Finance sectors. My expertise lies in architecting scalable test automation frameworks and implementing chaos testing strategies for microservices. I have successfully led teams in delivering high-quality solutions through CI/CD pipeline integration and advanced automation techniques.

- 1. Developed a comprehensive backend automation framework for microservices.
- 2. Championed chaos testing to enhance system resilience.
- 3. Implemented real-time observability for FIX message flows.
- 4. Managed high-performing QA teams, driving delivery excellence.

I thrive on challenging projects that demand innovative solutions and meticulous execution, ensuring quality standards that align with business objectives.

WORK EXPERIENCE

Senior Automation Engineer
Citibank

Dec 2016 - Present

Quality Engineering Leadership | Algorithmic Trading & Microservices

- Architected and contributed to a U.S. patent-approved chaos testing platform, simulating latency, resource, and failure scenarios to improve resilience of low-latency trading systems.
- Worked extensively in Trading Finance, Back Office processing, and Reconciliation workflows, ensuring accurate trade lifecycle validation, accounting controls, financial data integrity, and post-trade operational quality.
- Designed and owned a high-performance FIX automation framework, validating full order lifecycle (New/Amend/Cancel/Execution) with strict latency and throughput SLAs.
- Built deep FIX protocol validation (session management, sequencing, reconciliation, drop-copy, recovery) across Solace and TIBCO messaging layers.
- Automated binary message flows over TIBCO/Apache systems and implemented TCP/IP-level testing for connectivity, stability, and failover under high load.
- Owned QE for 5+ trading applications across APAC & EMEA, ensuring release governance and consistent quality standards.
- Developed scalable automation frameworks (Java, Python, Shell) covering functional, integration, regression, and stress testing.
- Established API & microservices testing frameworks with event-driven validation, contract testing, and service virtualization.
- Implemented TDD, concurrency, and race condition testing to strengthen system robustness in high-throughput environments.
- Orchestrated CI/CD pipelines using Ansible, Docker, Artifactory, and OpenShift for scalable, parallel execution.
- Built Grafana dashboards for real-time visibility into FIX flows, latency, throughput, and system health.
- Delivered automated test frameworks for Citibank equities trading platform, ensuring high reliability and performance.
- Managed E2E environments and production-like testing for distributed, low-latency systems.
- Led and scaled SDET/QA teams (6+ engineers/contractors), driving delivery, mentoring, and engineering excellence.
- Championed AI tools (Copilot, Claude, Devin) to improve productivity, speed, and test coverage.
- Established KPIs, governance, and quality metrics (latency, defect leakage, release

KEY SKILLS

- ✓ Agile
- ✓ Java
- ✓ Javascript
- ✓ JSON
- ✓ Python
- ✓ Docker
- ✓ DevOps
- ✓ ChaosEnginner
- ✓ Capital Market
- ✓ Core Java
- ✓ OOPS Design Patterns
- ✓ VBA Coding
- ✓ Cucumber Framework
- ✓ Testng
- ✓ Solace
- ✓ TIBCO
- ✓ Shell Scripting
- ✓ Jenkins CI
- ✓ Agile Methodology
- ✓ React.js
- ✓ Cidc Pipeline
- ✓ JIRA
- ✓ Bitbucket
- ✓ Github
- ✓ IntelliJ Idea
- ✓ Co-Pilot

LANGUAGES

- English
- Hindi
- Marathi

readiness) for executive visibility.

- Collaborated with Trading, Quant, and global teams to align quality engineering with front-office business goals.

Senior QA Engineer

SUNGARD now FIS

Jul 2013 - Nov 2016

- Review requirement and design specifications, providing expert feedback on testability for new functionality projects to enhance quality assurance processes.
- Analyze requirements meticulously and develop comprehensive test cases aimed at minimizing software application risks and improving defect detection.
- Create and execute detailed test plans to verify that software deliverables meet specified requirements and adhere to quality standards.
- Automate defect scenarios using a keyword-driven framework in QTP, performing regression test suite analysis to ensure stability and reliability.
- Develop, maintain, and execute automated test scripts within established frameworks, increasing test coverage and efficiency.
- Design and implement data-driven tests integrated with existing automation frameworks to validate varied input scenarios effectively.
- Debug, enhance, and execute automated test scripts continuously to optimize test performance and accuracy.

Test Analyst

Barclays Technology Centre India Private Limited

Jan 2012 - Jul 2013

- Experience of working on cutting-edge technologies with an integrated set of competencies that encompass areas related to Testing, DB Testing,
- Functional testing, testing Acquisitions, Customer Websites for Collections in Credit Cards.
- Ensuring 100% compliance on time sheet, mandatory training and maintaining testing team leave management.
- Maintaining project knowledge repository and providing lesson learnt to project teams.
- Innovative & results-driven professional focused on achieving exceptional results in highly competitive environments that demand continuous improvement; leverages on finely-honed interpersonal skills to successfully lead a team.
- Proven abilities in overseeing complete project related activities entailing including planning, designing & executing framework, schedule development, progress monitoring, delivery, etc.
- Creation and execution of test cases, test scenarios, bug documentation and bug tracking; creation of project documents like test plans, schedules, release notes and defect tracking reports.

Jr. Software Tester

TCS e-Serve Limited

May 2010 - Jan 2012

- Review Requirement and Design specifications and provide feedback on test-ability for new functionality projects.
- Performing Regression Testing and Quality Analysis (QA) for the credit cards team.
- Identifying and optimizing redundant test scripts and thereby increasing productivity.
- Responsible for preparation of test plan and exit report as part of the test cycle.
- Defect management; ensuring that defects are tracked per SLA and to closure.
- Support development and On-site team with testing of various high risks Trouble Reports (TR).
